

WHITE PAPER

Cultinomics

15% PancakeSwap Buy Fees | 20% PancakeSwap Sell Fees

CULT & CULTX

CULT

1.8 Trillion total supply (1 Trillion Max Supply), liquidity locked and a strategic "Cult Sacrifice" reserve that is programmed with mechanics to buy back into Cultonomics automatically.

Cultx

250 Billion Total Supply; 25 Billion Max Supply

Features:

Low Total Supply

a total supply of 1 Trillion tokens total with 6 decimal fungibility means that decimals of the token can reach a 0.01\$ target value that can be realistically set for the token; and actually, be achieved.

- 3 decimal

Liquidity Locked:

Out of the 1.8 Trillion tokens total supply, 1 Trillion will now be used for the Max Supply. We have two token lockers that are currently holding 1.1 Trillion Tokens. Depending on how many tokens are pooled into the liquidity on PancakeSwap at the time of the unlock will determine if the coins are just relocked for multiple years or added to the liquidity pool. Liquidity provider tokens generated by the CULT / BNB PancakeSwap pool will be held by, and locked within, the Cultonomics smart contract. This guarantees the integrity and long-term sustainability of the token. Warning our token creation address still does have a lot of tokens. We understand that this is of concern and we will be locking up these tokens as soon as we can determine if more tokens are needed for liquidity pool on PancakeSwap.

Cultx is our token that we will be using in our future project for our NFT's. Cultx will be the token that will be used to obtain our NFT's once released.

--- Cult Sacrifice ---

The strategic reserve function built into the Cultonomics smart contract stores BNB used for token buybacks. This helps to stabilize the price floor and protect holders' investments during whole dumps,

bot attacks, or other downward market trends. Bought back tokens can also be 'summoned' by the CULT smart contract. During this process, CULT tokens are transferred back from the dead address and injected with reserve BNB into the PancakeSwap pool. This prevents excessive or unneeded permanent token burns and allows the coin's true market cap to continually increase throughout the token's entire lifetime.

Cultinomics

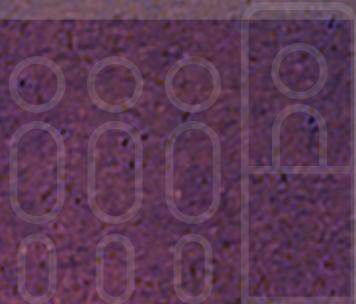

CULT STAKING:

Why:

Staking will be an important step in getting the Max Supply of the coin out into circulation.

System:

We will be locking almost all 1 Trillion of the supply away except for 100 billion tokens. The way our staking contract works is that it takes the needed CULT from the Creator Wallet Address and pays out to those who stake their tokens. In order to combat the worries that would come with a large number of tokens in the Creator Wallet Address, we will be locking coins away on a vesting period that will unlock 2 Billion Tokens every week. If the reserve of tokens reaches more than 200 Billion. The tokens will be relocked again for future payouts. The incentive for those who are staking, is the ability to generate new coins into circulation and also earn enough CULT coins to buy our NFT's that will be released soon as well.
