

Features:

A mid level total supply, liquidity locked for a year and the community vote on what to do with unlocked tokens, and a strategic "Cult Sacrifice" reserve that is programmed with mechanics to buyback into Cultonomics automatically.

Low Total Supply

total supply of 1.8 Trillion tokens with 6 decimal fungibility means that a \$0.25 value target can be realistically set for the token; and actually, be achieved.

Liquidity Locked:

for a year and half. After this time period, there will be a vote taken in the community discord to see what decision should be taken for the next year and a half. This could mean burning supply, reducing total supply and switching fee's. Liquidity provider tokens generated by the CULT / BNB PancakeSwap pool will be held by, and locked within, the Cultonomics smart contract. This guarantees the integrity and long-term sustainability of the token.

Cult Sacrifice

The strategic reserve function built into the Cultonomics smart contract stores BNB used for token buybacks. This helps to stabilize the price floor and protect holders' investments during whole dumps,

bot attacks, or other downward market trends. Bought back tokens can also be 'rewashed' by the CULT smart contract. During this process, CULT tokens are transferred back from the dead address and injected with War Chest BNB into the PancakeSwap pool. This prevents excessive or unneeded permanent token burns and allows the coin's true market cap to continually increase throughout the token's entire lifetime.
