

WHITE PAPER

Cultinomics

15% PancakeSwap Buy Fees | 20% PancakeSwap Sell Fees

Features:

A mid level total supply, liquidity locked for a year and the community vote on what to do with unlocked tokens, and a strategic "Cult Sacrifice" reserve that is programmed with mechanics to buyback into Culonomics automatically.

Low Total Supply

The total supply of 4 tokens total with 14 decimal fungibility means that decimals of the token can reach a medium target value that can be realistically set for the token; and actually, be achieved.

Liquidity Locked:

The coin will be broken off into smaller parts for the starting liquidity. ".05" will be put as the first starting coins in circulation. ".10" will be added to our staking platform which will provide incentive to our holders to earn more. ".10" will be locked away for 2 Years. Another ".10" will be locked away for 4. These two when unlocked will be added to the liquidity and relocked again. The rest will be locked away forever. Liquidity provider tokens generated by the CULT / BNB PancakeSwap pool will be held by, and locked within, the Culonomics smart contract. This guarantees the integrity and long-term sustainability of the token.

--- Cult Sacrifice ---

The strategic reserve function built into the Culonomics smart contract stores BNB used for token buybacks. This helps to stabilize the price floor and protect holders' investments during whole dumps,

bot attacks, or other downward market trends. Bought back tokens can also be 'summoned' by the CULT smart contract. During this process, CULT tokens are transferred back from the dead address and injected with reserve BNB into the PancakeSwap pool. This prevents excessive or unneeded permanent token burns and allows the coin's true market cap to continually increase throughout the token's entire lifetime.
