

WHITE PAPER

Cultonomics

15% PancakeSwap Buy Fees | 20% PancakeSwap Sell Fees

Features:

250 Billion total supply, liquidity locked and a strategic "Cult Sacrifice" reserve that is programmed with mechanics to buy back into Cultonomics automatically.

Low Total Supply

total supply of 250 Billion tokens total with 3 decimal fungibility means that decimal of the token can reach a 1\$ target value that can be realistically set for the token; and actually, be achieved.

Liquidity Locked:

The 250 Billion tokens will be broken off into smaller parts for the starting liquidity. "25B" will be put as the first tokens in circulation. Out of the "25B", "5B" will be added to our staking platform which will provide an incentive to our holders to earn more. "5B" will be kept for developmental/marketing purposes. The other "10B" will be added to our presale on DxSale.app. "2.5B" will be locked away for 4 Years. Another "2.5B" will be locked away for 8. These two when unlocked will be added to the liquidity and relocked again. Liquidity provider tokens generated by the CULT / BNB PancakeSwap pool will be held by, and locked within, the Cultonomics smart contract. This guarantees the integrity and long-term sustainability of the token.

--- Cult Sacrifice ---

The strategic reserve function built into the Cultonomics smart contract stores BNB used for token buybacks. This helps to stabilize the price floor and protect holders' investments during whole dumps,

bot attacks, or other downward market trends. Bought back tokens can also be 'summoned' by the CULT smart contract. During this process, CULT tokens are transferred back from the dead address and injected with reserve BNB into the PancakeSwap pool. This prevents excessive or unneeded permanent token burns and allows the coin's true market cap to continually increase throughout the token's entire lifetime.
